🌌 The Background — What Is It Called?

The most critical visual element — analyzed in full depth with exact CSS & JS properties

OFFICIAL NAME

Animated Starfield Particle System

Also known as: Ambient Particle Background / Space Nebula Background / Floating Dots Canvas Animation

🔗 [View Source Code](#)

BACKGROUND ELEMENT	NAME / LABEL	ACTUAL CSS / JS PROPERTY
Dark navy base color	Deep Space Background	background-color: #0B1426 (or #0D1B2A dark navy)
Tiny white dots everywhere	Particle System	tsParticles / particles.js library Renders on <canvas> element — position:fixed, z-index:0
Larger glowing orbs	Floating Blob Particles	border-radius: 50% box-shadow: 0 0 8px rgba(255,255,255,0.6)
Dots slowly drifting	Float / Drift Animation	@keyframes float { transform: translateY(-8px) translateX(5px) } Random animation-duration per particle
Multiple depth layers	Parallax Depth Layering	Multiple z-index layers moving at different speeds via requestAnimationFrame loop
Teal dots in light mode	Theme-Aware Particles	JS: particleColor = isDark ? "#ffffff" : "#22C55E" Changes on theme toggle event
Light mode background	Soft Gradient Background	background: #F0F4FF or: linear-gradient(135deg, #EFF6FF, #F0FDF4)

&🔧 HOW THE PARTICLE SYSTEM WORKS

- A <canvas> element covers the full viewport behind all content (position: fixed; z-index: 0)
- JavaScript draws hundreds of dots at random positions with sizes 1px–5px
- Each dot has its own velocity, direction, and opacity
- On every animation frame (requestAnimationFrame), positions update !' creates drift effect
- Dots that go off-screen reappear on the other side (seamless wrap-around)

CSS Custom Properties

var(--bg), var(--text) — Theme toggle throughout

03

CSS transition:

All hover effects throughout the page

05

transform: translateY()

Float loop, slide-up entrance, button hover lift

07

transform: scale()

Icon pop-in, image zoom, button hover grow

09

animation-delay / stagger

Text reveal, icon entry, event rows — sequential delays

11

backdrop-filter: blur()

Glassmorphism navbar and cards (Frosted Glass)

13

linear-gradient()

Gradient text, button backgrounds, section bg

15

IntersectionObserver API

Scroll-triggered reveal animations throughout

17

max-height transition

Accordion / card expand animation

19

animation: ease-in-out infinite

Float loops — hero cards and phone mockup

21

position: sticky

Navbar stays fixed at top on scroll

23

border-radius

Rounded cards, pill buttons, circular orbs

25

tsParticles / Canvas API

The entire starfield background particle system

27

clamp() — fluid sizing

Footer watermark font-size responsive scaling

02

@keyframes animations

float, marquee, spin, popIn, slideInLeft, fadeInUp, etc.

04

transform: rotate()

Card fan spread, chevron icon, refresh spin

06

transform: translateX()

Arrow hover, marquee scroll animation

08

opacity transition

Fade-in entrance animations, scroll-to-top button

10

animation: linear infinite

Marquee carousel, particle continuous drift

12

-webkit-background-clip: text

Gradient text "ecosystem in seconds"

14

box-shadow

Glow hover effects, button depth, active ring

16

overflow: hidden

Image zoom clipping, accordion collapse

18

transform-origin

Card fan rotation center point (bottom center)

20

scroll-behavior: smooth

Smooth scroll-to-top button behavior

22

::after pseudo-element

Nav link underline hover effect

24

animation: forwards

Progress bar stays at 100% after animation

26

requestAnimationFrame

Particle movement loop, counter animation

28

z-index layering

Particle canvas z:0 behind all content z:10+
